SAN-DELETAA

SANITARY PAD DISPOSER

All of us are aware of the contribution of sanitary Napkins towards the emancipation and betterment of a modern day women. Ironically this freedom and comfort itself has timed out to be a curse for women due to unavailability of a proper and scientific method of disposal

The used sanitary pads being non bio-degradable, will remain as it is in soil, contaminating the soil and water resources. Where as burning pollutes the atmosphere and is not practical in cities, where open space is a constraint. Flushing in toilets and throwing in public places clogs the drainage system leading to various health hazards and also wastage of our ever diminishing water resources. Studies have revealed that a single flushing of the toilet needs 8 to 10 liters of water. "SAN-DELETAA" the ultimate pad disposer provides the only solution to the above problems.

Model : SD 601
Size : 12"x6.5"x6.5" Sqr.
Weight : 4.5 Kg.
